Subject: RE: Aldicarb Citrus Action Working Draft

There were some commodities that used FT data and 100 PCT. However, those commodities are not risk drivers. The risk drivers were fully refined. I'll add some text to address this.

I tried to address Dana's comments on the tox – shuffled things around a bit to try to make it more readable. Please let me know what you think. However, I didn't know how to address her comment about conservatisms in the dietary assessment – I think there are very few. Will and David – any thoughts – use of field trial data for some commodities? 100% CT for some?

Hi David – I started addressing some of Dana's comments and realized that it opened as read-only. I've attached it here for everyone's access on my one-drive. Thanks. Mike

Subject: Aldicarb Citrus Action Working Draft

Good Afternoon,

Attached is a draft of HED's Aldicarb risk assessment. Due to the quick turn-around required for this action the document is currently being reviewed by the team to clean up odds and ends, but no major changes are expected.

Thank you,

David Nadrchal
